Close out report — Project #1200218

Project title: Support DRep to connect Delegators (CIP-1694)
Project ID: #1200218
Category: Ecosystem
Submitted by: Tempo team
Start Date: 2024-08-12

Final Milestone Deliverables

Tempo has successfully completed all planned activities and deliverables outlined across our four milestones, culminating in the final milestone completed in February 2025. Below is a summary of the key accomplishments:

Milestone 1: Project Planning and Design

- Completed a detailed Project Outline Document describing scope, methodology, development plan, and resource allocation.
- Produced a full Requirements Document covering UI/UX design with Figma files.
- Developed a High-Level Design Documentation covering architecture, components, data workflow, and system interactions.

Milestone 2: Development and Testing

- Successfully deployed the core platform to SanchoNet Testnet with the following features:
    - DRep Registration, Profiles, and Listing
    - Proposal creation and voting system for delegators
- All features were thoroughly tested with execution reports demonstrating stability and full compliance with defined requirements.

Milestone 3: Launch and Community Engagement

- Launched the live platform Tempo.Vote and promoted via social media and community channels.
- Successfully onboarded 3+ active DReps and facilitated the creation of multiple proposals within their communities.
- Engaged community members through feedback loops and real-world testing (mainly via our Telegram channel).

Final Milestone

- Integrated Live Tempo Support for the DRep platform.
- Delivered a final closeout report (this document).
- Produced and published the final closeout video, offering a comprehensive explanation of platform features for both DReps and delegators.

Evidence of Completion

- Testnet Deployment: https://preview.tempo.vote and https://sanchonet.tempo.vote
- Live platform: https://tempo.vote
- Community Metrics: Since its launch, the Tempo platform has had over 50 DReps create their own communities to engage with delegators, far exceeding the initial expectation of 3. The platform has also built an X channel with over 2k followers and a steady stream of useful daily updates. In addition, Tempo maintains a Telegram channel to quickly respond to bug reports and receive feedback from the community to improve the product.
- Final Video: https://youtu.be/NWT9TeKKaz8

Final Outcome Summary

Tempo delivers a working delegation platform that lowers the barrier for DReps and delegators to participate in governance on Cardano. The platform simplifies proposal creation, DRep registration, and promotes a transparent, trackable ecosystem.

We have created:

- A working testnet-validated and community-tested tool.
- A live platform with real user engagement.
- Publicly accessible educational materials and guides.

Lessons Learned:

- SanchoNet testing proved to be an effective staging environment for simulating real-world governance scenarios.
- Community feedback during the pilot stage highlighted the importance of simple onboarding UX, which we iterated on accordingly.
- Managing expectations for Mainnet readiness required clear communication due to dependencies on external Cardano milestones (e.g., Chang fork readiness).

Next Steps

We plan to:

- Continue gathering feedback from DReps and delegators.

- Monitor platform performance and improve the UX/UI based on analytics.
- Submit a proposal in Fund 15 to support users in submitting GA proposals with a 100k ADA deposit loan.
- Seek further funding and collaborations to expand functionality (e.g., mobile support, multilingual access, richer proposal analytics).

Acknowledgements

We deeply thank the Cardano community, and every voter who supported Tempo. Your trust enabled us to bring a meaningful governance tool to life.
